                                                                                             transcription regulator WBSCR9 - mouse

N.Alternate names: Williams-Beuren syndrome deletion transcript 9 homolog
C.Species: Muse musculus (house mouse)
C.Date: 15-Oct-1999 #sequence_revision 15-Oct-1999 #text_change 09-Jul-2004
C.Accession: T17401
R.Peoples, R.J.; Cisco, M.J.; Kaplan, P.; Francke, U.
Cytogenet. Cell Genet. 82, 238-246, 1998
A.Title: Identification of the WBSCR9 gene, encoding a novel transcriptional regulator,
A.Reference number: 218735; MUID:99077764; PMID:985827
A.Accession: T17401
A.Status: preliminary; translated from GB/EMBL/DDBJ

-!- DEVELOPMENTAL STAGE: Expressed as early as day 7 and in equal
FUNCTION: Forms a chromatin remodeling complex that mobilizes nucleosomes and reconfigures irregular chromatin to a regular nucleosomal array structure (By similarity).

SUBUNIT: Interacts with ISMI (imitation SMI protein) to form the STF-ISMI chromatin remodeling complex (MICH) (By similarity). SUBCELLULAR LOCATION: Nuclear (Potential). Accumulates in pericentromeric heterochromatin during replication (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Indels 189;

"Drosophila stoned proteins regulate the rate and fidelity of synaptic vesicle internalization.";
J. Neurosci. 21:3034-3044(2001).
-!- FUNCTION: Adapter protein involved in endocytic recycling of synaptic vesicles membranes. May act by mediating the retrieval of synaptotagmin protein Syt from the plasma membrane, thereby facilitating the internalization of multiple synaptic vesicles
                                                                                   MEDLINE=22426071; PubMed=12537574;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        presynatic proteins, are thought to mediate an interaction with Alpha-adaptin (By similarity).
MISCELLANEOUS: StnB, which is involved in the same pathway, is derived from the same dicistronic transcript that encodes these two different proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     III boutons.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                 US-09-155-676B-5
